Thank-You App — QA Test Case Suite

Comprehensive Verification & Acceptance Tests across Checkout, Thank-You Page, Admin & Webhooks

Date: Nov 2, 2026 | **Total: 34 Test Cases** | **Status: Updated (No Timer)**

SEVERITY LEGEND:

- **CRITICAL** — Financial errors, order edit/checkout failure, data loss
- **HIGH** — Core feature broken without workaround, webhook drop
- **MEDIUM** — Secondary feature issue, validation or pagination flaw
- **LOW** — Visual inconsistency, cosmetic/typography defect

1. 1-Click Post-Purchase Upsell (thank-you-upsell & /api/add-to-order)

6 Test Cases

TEST ID		STEPS TO EXECUTE	EXPECTED RESULT	SEVERITY
TC-UP-01	**Successful 1-Click Upsell order edit**	1. Complete order to reach Thank You page. 2. Click **"Add to Order"** on upsell item.	Item added to existing Shopify order with $0 extra shipping fee; order edit commits; success banner displays.	CRITICAL
TC-UP-02	**Persistent Upsell Availability (No Timer Lockout)**	1. View Thank You page without time limit. 2. Click "Add to Order" at any point.	Upsell widget remains active indefinitely without countdown expiry or disabled state; order edit succeeds.	HIGH
TC-UP-03	**Multi-currency upsell order**	1. Checkout in foreign currency (e.g., CAD or EUR). 2. Accept 1-click upsell on Thank You page.	Upsell is billed in order currency (CAD/EUR); amount and currency properly recorded in EarningsLog.	CRITICAL
TC-UP-04	**Out-of-stock inventory validation**	1. Set variant stock to 0 with continue-selling disabled. 2. Attempt to add item on Thank You page.	Graceful error message shown; page does not crash; unfulfillable line item is rejected.	HIGH
TC-UP-05	**Double-click / rapid-click debounce**	1. Rapidly double-click or spam "Add to Order" button.	Button immediately enters loading state on first click; exactly one line item is added without duplicate charges.	HIGH
TC-UP-06	**Targeting trigger rules (Tags / Vendor)**	1. Configure block with trigger "Tags include VIP". 2. Test orders with and without that product tag.	Upsell widget only renders on Thank You page when ordered products match tag trigger condition.	MEDIUM

2. Checkout Extensions (Checkout Upsell, Free Shipping Bar, Gift Options)

4 Test Cases

TEST ID		STEPS TO EXECUTE	EXPECTED RESULT	SEVERITY
TC-CK-01	**Add Checkout Upsell to checkout**	1. During checkout, click "Add" on checkout upsell block.	Product variant added to checkout lines; order summary and subtotal update instantly.	CRITICAL
TC-CK-02	**Free Shipping progress bar calculation**	1. Cart subtotal below threshold (e.g. $30/$50). 2. Increase quantity to surpass $50.	Bar reflects progress proportionately; unlocks celebration message once threshold is reached.	HIGH
TC-CK-03	**Gift Wrapping selection & custom note**	1. Check "Gift Wrapping ($5.00)" in checkout. 2. Enter custom message: "Happy Birthday!".	Gift wrap fee is appended to checkout total; custom message is attached to order attributes.	HIGH
TC-CK-04	**Deselect Gift Wrapping**	1. Uncheck Gift Wrapping before completing payment.	Fee and attributes are removed immediately from checkout total.	HIGH

3. Thank-You Page Engagement Blocks

5 Test Cases

TEST ID		STEPS TO EXECUTE	EXPECTED RESULT	SEVERITY
TC-TY-01	**Discount code Click-to-Copy**	1. Click "Copy Code" on Thank You discount block.	Code copied to clipboard; button label switches to "Copied!" for 2 seconds.	MEDIUM
TC-TY-02	**Survey single vote constraint**	1. Select survey option (e.g. "Instagram") and submit. 2. Refresh Thank You page.	Response saved to HowDidYouHearResponse; confirmation shown; user cannot submit duplicate vote for same order.	MEDIUM
TC-TY-03	**Survey custom text write-in**	1. Select "Other" and enter "Podcast sponsorship". 2. Submit.	Custom text answer successfully stored in database with associated order details.	LOW
TC-TY-04	**Newsletter subscription opt-in**	1. Enter email and click Subscribe on Thank You page.	Subscription request succeeds; click recorded in SubscriptionClick; success feedback shown.	MEDIUM
TC-TY-05	**Media & FAQ blocks rendering**	1. View published Image Banner, Video Banner, and FAQ.	Image displays with link; video player streams properly; FAQ accordion items expand/collapse smoothly.	LOW

4. Admin Block Management (/app/blocks)

5 Test Cases

TEST ID		STEPS TO EXECUTE	EXPECTED RESULT	SEVERITY
TC-ADM-01	**Create block validation**	1. In /app/blocks/new, leave mandatory fields empty and click Save.	Form catches errors; inline validation alerts shown; form does not silently redirect or save incomplete data.	CRITICAL
TC-ADM-02	**Toggle Active / Draft block status**	1. Switch active block to Draft in Admin and save. 2. Check storefront Thank You page.	Block is instantly removed from customer storefront; changing back to Active restores it immediately.	HIGH
TC-ADM-03	**Block position reordering**	1. Rearrange block order in Admin. 2. Check storefront layout.	Blocks render on storefront in exact order configured in Admin.	MEDIUM
TC-ADM-04	**Delete block**	1. Delete a block from blocks table.	Block removed from database; storefront stops serving it.	MEDIUM
TC-ADM-05	**High-resolution image upload in config**	1. Upload a 1MB image in block editor. 2. Save block.	Image config stores without database string truncation errors.	MEDIUM

5. Money Made Dashboard (/app/money-made)

6 Test Cases

TEST ID		STEPS TO EXECUTE	EXPECTED RESULT	SEVERITY
TC-MM-01	**Total Revenue Added calculation**	1. Generate 1-click upsell ($40), discount redemption ($20), gift wrap ($5).	Top banner shows $65.00 total; breakdown bars display correct amounts and percentages.	CRITICAL
TC-MM-02	**Earnings Log table structure**	1. Open /app/money-made and review Earnings Log table.	Table contains 5 columns (Order, Feature, Item Added, Revenue Added, Date); removed columns (Status/Shipping) are absent.	HIGH
TC-MM-03	**Cancelled order exclusion from revenue**	1. Cancel an order in Shopify that had upsell conversion.	Revenue aggregation excludes cancelled order so merchant earnings are never artificially inflated.	CRITICAL
TC-MM-04	**Manual "Sync Orders" button**	1. Click "Sync Orders" button in dashboard header.	Pulls latest orders from Shopify via GraphQL; updates EarningsLog; displays success feedback toast.	HIGH

TEST ID		STEPS TO EXECUTE	EXPECTED RESULT	SEVERITY
TC-MM-05	**Server-side pagination**	1. With >10 records, navigate through pages using < and >.	Fetches 10 items per page on-demand; page indicator ("Page 1 of X") updates correctly.	MEDIUM
TC-MM-06	**Zero state display**	1. Load /app/money-made on a store with no conversions.	Displays $0.00 total and friendly empty state card without runtime errors.	MEDIUM

6. Webhooks & Order Lifecycle

4 Test Cases

TEST ID		STEPS TO EXECUTE	EXPECTED RESULT	SEVERITY
TC-WH-01	**orders/create discount redemption**	1. Order placed using Thank-You app discount code.	Webhook creates DISCOUNT_CODE record in EarningsLog with order price and customer email.	CRITICAL
TC-WH-02	**orders/create gift wrap detection**	1. Order placed with gift wrap line item / attribute.	Webhook creates GIFT_WRAP record in EarningsLog with correct wrap fee.	CRITICAL
TC-WH-03	**orders/cancelled status update**	1. Cancel an order in Shopify admin.	Webhook updates associated EarningsLog records to status: "CANCELLED".	CRITICAL
TC-WH-04	**Duplicate webhook replay protection**	1. Send identical orders/create webhook payload twice.	Second delivery is ignored via idempotency check; no duplicate earnings rows created.	HIGH

7. Security, Multi-Tenancy & Performance

4 Test Cases

TEST ID		STEPS TO EXECUTE	EXPECTED RESULT	SEVERITY
TC-SEC-01	**Multi-tenant shop data isolation**	1. Access /api/blocks or /app/money-made authenticated as Store A. 2. Attempt querying data for Store B.	Store A can never view or aggregate blocks/revenue from Store B. All queries strictly scoped to where: {shop}.	CRITICAL

TEST ID		STEPS TO EXECUTE	EXPECTED RESULT	SEVERITY
TC-SEC-02	**Webhook HMAC signature verification**	1. Send spoofed POST to /webhooks/orders_create without valid Shopify HMAC header.	Webhook rejects request with 401 Unauthorized; no database modification occurs.	CRITICAL
TC-SEC-03	**Storefront API CORS & preflight**	1. Send OPTIONS preflight and POST requests to /api/add-to-order from storefront origin.	Returns proper CORS headers (Access-Control-Allow-Origin, 204 for preflight) without browser blocking.	HIGH
TC-SEC-04	**Storefront Thank You page load latency**	1. Measure API response times for /api/recommendations and /api/blocks on page load.	APIs respond under 300ms to eliminate visual layout shift (CLS) on checkout thank-you screen.	MEDIUM
